AI CAREERS FOR WOMEN

LINKEDIN FELLOWSHIP

Project – 'Campus Compass AI' : Smart Institutional Navigation Bot

---

Domain - Institutional Knowledge and Policy Management

[Excel / Copilot Studio / AI Chatbot]

A Collaborative Initiative

equipping students with practical skills in AI, Data Analytics, and Business Intelligence

Year - 2026

Project Title	**'Campus Compass AI': Smart Institutional Navigation Bot**
Project Domain	**Institutional Knowledge & Policy Management**
Tools Used	**Excel + Microsoft Copilot Studio+ AI Chatbot**

3. Problem Statement

Most of the higher education institutions often face challenges in onboarding new faculty members, including **information overload, inconsistent delivery of policies, delays in access to resources, and low engagement during orientation**. Many of these problems also arise due to nature and scope of employment, namely – **Fixed term tenure, Adjunct or Visiting faculty** and a minority of faculties are also hired on **online or remote basis**. In such circumstances, manual processes like drafting applications, emails, PDFs, and in-person sessions lead to confusion, higher administrative workload, and suboptimal integration, resulting in reduced faculty productivity and retention. In the rapidly progressing age of Artificial Intelligence and Generative AI , an automated, intelligent solution is needed to streamline this process, ensuring personalized, accessible, and interactive onboarding. However, another lacunae is the lack of available resources and skills for implementing the same

This project addresses these challenges by applying data cleaning, analysis, visualization, and AI integration techniques using industry-standard tools. The project will demonstrate how structured data workflows combined with AI assistance can produce accurate, actionable insights and outputs relevant to a chosen real-world domain.

4. Objectives

Through my project **,"Faculty Onboarding and Orientation Bot"—an AI-powered chatbot**, I aim to address and correct the following challenges and streamline the process making it easier for new faculties as well as the administration to access data and manage problems real time at the same time delivering valuable experiences for the new faculty members.

- Enhancing user engagement through **interactive Q&A, multimedia content, and progress tracking.**
- **Automate Administrative Tasks:** Instantly access and apply for **Leave Application , Library Card , On Duty form**s at the click of a button to reduce administrative burden.
- **Online Onboarding New Faculty:** Introduce the institution's **vision, mission, values, hierarchy and organizational culture** to foster a sense of belonging from day one as well as guidance on individual role and scope in the organization.

- **Accelerate Productivity:** Offer immediate access to teaching tools, learning **management systems (LMS),** and research resources to help faculty start their roles faster.

- **Customized Information Tracker :** Offer a, instant, searchable, and consistent source of information on important pointers like –

a. ***Leave Balance***
b. ***Academic Calendars (Cultural Events)***
c. ***Annual Holiday List***
d. ***Semester Breaks***
e. ***Hackathons***
f. ***Placement Updates***
g. ***College/University Headlines***
h. ***Update of Different groups / committees***

- **Facilitate Policy Compliance:** Ensure new hires understand academic standards, student policies, and safety protocols.
- **Grievance Redressal :** The bot provides a platform for direct and anonymous grievance redressal for addressing problems and challenges to a specific committee – Grievance Committee and get result in shorter Turnaround time. Their identity will not be disclosed for privacy concerns and their issues will be dealt with in a systematic manner and documented for future references.
- **Improve Retention and Engagement:** Enhance the overall experience so that there are no loopholes and information deficit thereby reinforcing their decision to join and improving long-term satisfaction and retention of the employees

5. Methodology / Implementation Plan

Provide a simple overview of how the project will be carried out. The following five-phase workflow applies to all projects under this fellowship program.

#	Phase	Description
1	**Data Collection & Exploration**	Obtain the raw dataset (CSV / Excel) from Kaggle, Edunet, or any suitable source. Understand field names, data types, and row count. For AI prompt projects, define the use case and target audience instead.
2	**Data Cleaning & Preprocessing**	Remove duplicates, handle null or missing values, fix incorrect data types, and standardize date and text formats using Excel (Remove Duplicates, IF, IFERROR, Text-to-Columns) or Power Query. For prompt-based projects, draft and structure initial prompts using Role, Context, Task, Format, and Tone components.

3	**Analysis & AI Integration**	Apply pivot tables, Excel formulas (SUMIF, COUNTIF, VLOOKUP), or Power BI DAX measures to derive key insights. Where applicable, use Microsoft Copilot or an AI Chatbot to generate narratives, summaries, or content outputs from the data or prompts.
4	**Visualization / Output**	Build interactive dashboards with charts, KPI cards, and slicers in Power BI or Excel. For AI-assisted projects, compile generated content outputs such as reports, marketing copy, or summaries. Document all AI prompts used alongside their outputs.
5	**Documentation & Submission**	Write the project report, upload all files to a GitHub repository, and record a video demonstration. Submit the GitHub link, video link, and dashboard link (if applicable) for evaluation.

6. Resources and Timeline

A. Hardware & Software Requirements

- PC — Intel Core i3 , 4 GB RAM (8 GB)
- Operating System: Windows 10 pro, version 22 H2
- Microsoft Excel (Microsoft 365 / Excel 2019)
- Microsoft Copilot — via Microsoft 365 subscription (Nirmaan id)
- AI Chatbot (ChatGPT ,Perplexity and Microsoft Copilot Web)
- Internet connection
- Web browser —Microsoft Edge (latest version)

B. Dataset

- Primary Dataset obtained from different university faculties by developing a questionnaire and compiling the results to come to a conclusion.

C. Project Timeline

A simple table showing planned tasks and expected completion dates.

Phase	Task	Tentative Completion Date
1	**Dataset collection, exploration, and understanding** – Collecting institution policy documents, faculty handbook and departmental procedures. Identify common onboarding questions and knowledge gaps among new faculty members. Collect and compile the dataset ready for the dashboard	*Week 1*
2	**Data cleaning, preprocessing, and validation / Prompt design** – Organize policy documents into structured categories – policies, mission and vision.	*Week 2*

	Remove redundant data and prepare structured knowledge base.	
3	**Analysis, AI tool integration (Copilot / Chatbot), and insight generation** – Take the help of Copilot to generate KPI's . Process towards developing a chatbot using the knowledge base prepared.	*Week 2 – 3*
4	**AI Chabot development** - Design Chabot conversation flows and integrate knowledge base using Microsoft Copilot studio, ChatGPT.Configure Chabot responses for faculty queries related to policies and procedures.	*Week 3*
5	**Testing, Evaluation and Documentation** - Report generation, evaluate the Chabot based on accuracy, accessibility and performance. Prepare final documentation and project report. GitHub upload, and video recording and submission. Tested chatbot system and final project documentation.	*Week 4*

7. Expected Outcomes / Conclusion

By the end of the project these are the following outcomes which I aim to focus on :-

- A **clean, validated dataset** with all preprocessing steps documented and a before/after comparison.
- An **interactive dashboard** or structured analytical report that clearly communicates key insights from the data.
- Demonstrated use of an **AI tool** (Microsoft Copilot and AI Chatbot) to generate insights, summaries, or content outputs, with prompts and results documented.
- A GitHub repository containing all project files, a completed fellowship project report, and a video demonstration of the working output.

1. Streamlined Data Collection (Excel)

The questionnaire integrated with Excel ensures that faculty information is captured in a structured, tabular format. This reduces manual entry errors, accelerates onboarding, and provides a reliable dataset for institutional reporting.

2. Personalized Orientation Experience (Chatbot)

The project has aimed to link questionnaire responses to the chatbot, faculty receive tailored guidance—such as role-specific policies, campus resources, and departmental contacts—making the orientation process more engaging and relevant.

3. Actionable Insights for Administration (KPI)

The Excel-based dataset enables dashboards and KPI tracking (e.g., workload balance perception, onboarding satisfaction scores, net promotor score and trainings available). Administrators can identify gaps, monitor trends, and continuously improve the onboarding process.

4. Centralized Knowledge Management

The bot acts as a single point of access for institutional policies, FAQs, and orientation materials. This reduces dependency on scattered documents and ensures faculty always have updated information at their fingertips.

5. Scalable and Future-Ready Solution

The combination of structured Excel data and chatbot automation creates a foundation that can be scaled to other roles (students, staff) and enhanced with analytics, AI-driven recommendations, and integration into HR or LMS systems.

8. References

List all references, tutorials, and documentation used in the project. Students must cite any material they referred to, including research papers, GitHub repositories, YouTube tutorials, blogs, and official documentation.
